## Supported features

The Macorva SSO integration supports Identity Provider (IDP)-initiated Authentication (SSO) Flow. This facilitates single-sign on initiated from withinOkta using OpenID Connect.

## Requirements
- The organization must be configured within Macorva before Okta SSO can be enabled. Macorva does not currently support Okta provisioning. If you have not already done so, work with Macorva staff (support@macorva.com) to provision your organization.
- Add the Macorva application from the Okta Integration Network.
- Verify that your users' email addresses are consistent with those provisioned in Macorva.
- Complete "Configuration Steps" below.

## Configuration steps

Gather information from Okta
- In the Okta admin page, click on the Macorva application. Then navigate to the Sign On tab.
- Note the values of Client ID and Client secret (click the eye icon to toggle visibility).
- Click OpenID Provider Metadata. In the JSON document shown, find the key titled "issuer" and note the associated URL (example: https://my-company-name.okta.com).

Send the information to Macorva
- Provide the gathered information to your Macorva support representative or support@macorva.com. As a reminder, your request should include the following:
  - Your Okta organization's issuer URL
  - The client ID associated with your Macorva application instance
  - The client secret associated with your Macorva application instance

Macorva support will complete the remaining configuration steps.

## Notes

Macorva associates Okta users with Macorva users using a unique combination of the Okta organization and the user's email address. Email addresses are required to use the Macorva SSO application.
